Highlights

Production of bituminous coal and lignite in the week ended May 1, 1982, as estimated by the Energy Information Administration, was 17,752,000 short tons. This was an increase of 348,000 short tons, or 2.0 percent from production in the previous week. Production in the corresponding week of 1981 was 8,583,000 short tons. Bituminous coal and lignite production from January 1 through May 1, 1982 totaled 290,415,000 short tons, up 15.9 percent from production in 1981.

Production of Pennsylvania anthracite in the week ended May 1, 1982, as estimated by the Energy Information Administration, was 132,000 short tons, an increase of 3,000 short tons or 2.3 percent from production in the previous week. Production in the corresponding week of 1981 was 110,000 short tons. Anthracite production from January 1 through May 1, 1982 totaled 2,159,000 short tons, up 11.5 percent from production in 1981.

This report includes monthly and annual summaries of production, consumption, exports, imports, and prices of coal from 1973 through the most recent month for which information is available. The Energy Information Administration, based on completion of its 1981 survey of coal distribution (Form EIA-6), has adjusted its preliminary estimate of U.S. coal production in 1981 from 807.5 million short tons to 820.1 million short tons. Final coal production data will be published in a June issue of the Weekly Coal Report.
